

INFORMED CONSENT

Developed by: Rafael Alexander Navas Rivera

Supervised by: Gleiston Guerrero Ulloa, Ph.D.

I, _____ voluntarily agree to participate in the research project entitled “WEB APPLICATION FOR SIMILARITY DETECTION THROUGH GENERATIVE ARTIFICIAL INTELLIGENCE AND ALGORITHMIC EFFICIENCY ANALYSIS IN SOFTWARE SOURCE CODE” during the year 2025. This project is part of the Curricular Integration Work for obtaining the Bachelor’s Degree in Software Engineering from Universidad Técnica Estatal de Quevedo.

I understand that my participation includes:

- Testing the SimilCode system through predefined test cases, including scenarios of identical, similar, and different code.
- Answering a structured survey on the practical usefulness, accuracy of results, and comprehensibility of the justifications generated by the system.
- Sharing my expert judgment on the technical and pedagogical relevance of the evaluated features.

I have been informed that:

- The data collected will be used exclusively for academic and research purposes.
- My identity will be protected through the use of pseudonyms in the project documentation.
- The responses provided in the survey will be treated confidentially.
- There are no correct or incorrect answers; only my professional opinion grounded in teaching experience is valued.

I confirm that I have understood the explanations provided regarding the objective and nature of the research project. I have had the opportunity to ask questions about my participation, and all my doubts have been satisfactorily resolved.

Likewise, I understand that:

- My participation is entirely voluntary, and I may withdraw from the validation process at any time without penalty.
- The evaluations issued regarding the system will be analyzed in an aggregated manner to determine the degree of software validation.
- The information will be used exclusively to support the results of the Curricular Integration Work.
- The project results may be published for academic purposes, always maintaining my anonymity.

I understand that this project seeks to validate a tool that facilitates similarity detection and

efficiency analysis in source code, contributing to improving academic evaluation processes and integrity in programming education.
